

# Cambio de puertos en Xampp

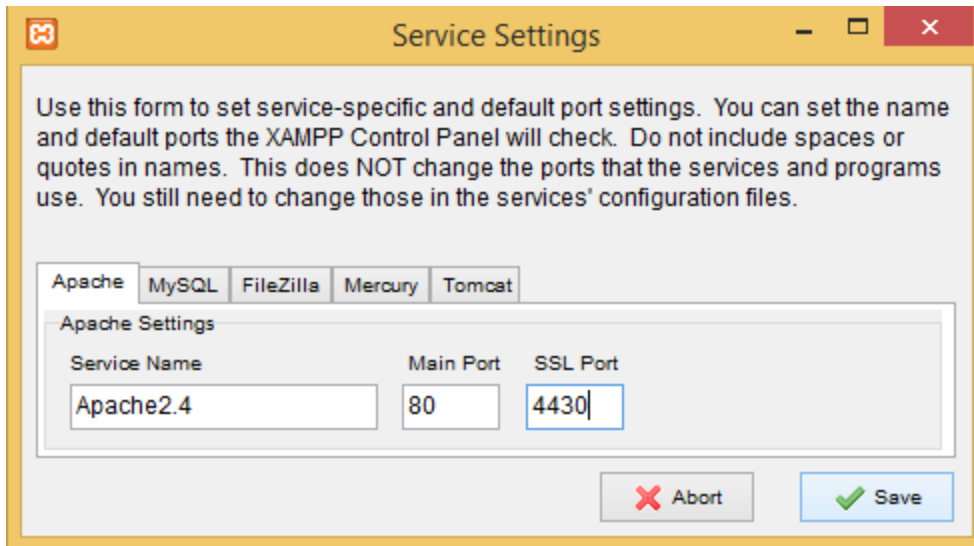

Clic en configuración.

Damos clic en **servicios y configuraciones de puertos**

Cambiamos el puerto de apache al que queremos definir en este caso usaremos el **puerto 4430**

The image shows a screenshot of the 'Service Settings' window in XAMPP. The window has a yellow title bar with the XAMPP logo and standard window controls. Inside, there is a text box explaining the purpose of the form: 'Use this form to set service-specific and default port settings. You can set the name and default ports the XAMPP Control Panel will check. Do not include spaces or quotes in names. This does NOT change the ports that the services and programs use. You still need to change those in the services' configuration files.'

Below the text, there are five tabs: 'Apache', 'MySQL', 'FileZilla', 'Mercury', and 'Tomcat'. The 'Apache' tab is selected. Under the 'Apache Settings' section, there are three input fields: 'Service Name' (containing 'Apache2.4'), 'Main Port' (containing '80'), and 'SSL Port' (containing '4430'). At the bottom right, there are two buttons: 'Abort' (with a red X icon) and 'Save' (with a green checkmark icon).

Service Name	Main Port	SSL Port
Apache2.4	80	4430
